Team 7: Pre-Production Idea

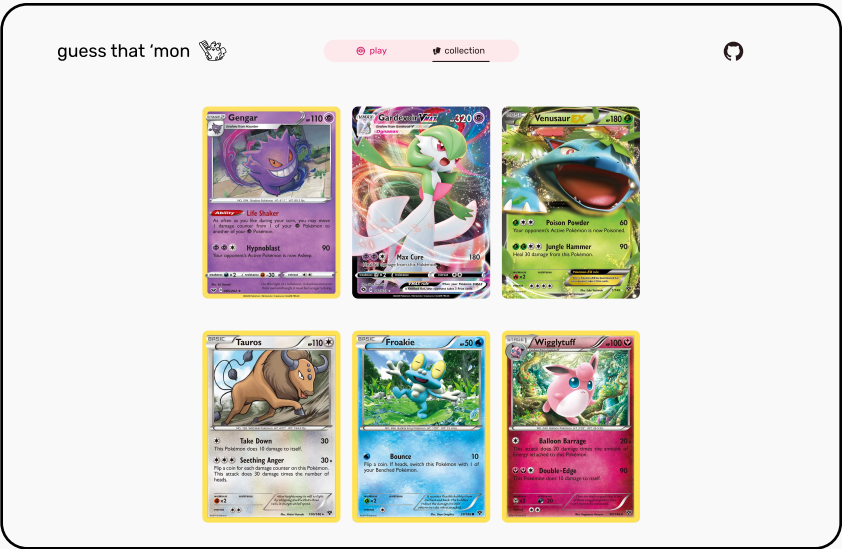

We are focusing on creating a “Guess That Pokémon” game, where people guess who the pokémon is based from the image provided! To answer, they are presented with options in which they must choose the correct name to proceed. On correct guesses, users will be able to a pokémon’s card to save to their collection. To bring this to life, we will be using “PokéAPI” and “PokémonTCG”. To style, we will use Tailwind CSS, and other possible JavaScript features like Scroll Reveal to add some interactivity to the page(s). To build, it will be made with React + Vite.
